Queensland Health

Dear Colleagues

Queensland Health is providing further advice on escalated use of Personal Protective Equipment (PPE), given the recent community COVID-19 cases in the South-East Corner of Queensland. These precautions are intended to limit the further spread of this variant in the community and allow an assessment of risk of any further exposure in the community.

As of 4.00pm, 30 September 2021, the following additional Local Government Area (LGAs) and areas, have now been determined by the Chief Health Officer to be in the “moderate” risk category:

- Townsville City I
- Palm Island Aboriginal Shire

The following LGAs remain designated as in the “moderate” risk category:

- Brisbane City
- Moreton Bay Regional
- Gold Coast City
- Redland City
- Logan City

All other LGAs remain in the ‘low’ risk category.

All health and care settings in the LGAs in the lists above are to escalate use of PPE to “moderate” risk category, including:

- Hospitals
- Residential Aged Care Facilities
- Residential Disability Care Facilities
- Prison Health Services
- Youth detention health services
- Community health care settings (including general practice, dentistry and home care settings)
- Queensland Health Vaccination Clinics

However, all staff working in Fever Clinics should continue to utilise “moderate” risk PPE usage, regardless of location.

In addition to these specific settings, clinicians and non-clinical personnel who live or work in the affected areas who also work in other facilities or areas outside the escalated LGAs should follow the requirement for escalated PPE.

Please note that this PPE guidance is additional to and does not replace the CHO directives that have been formally issued, and for which compliance is mandatory. The PPE escalation will remain in place until notification that it has been rescinded by the Chief Health Officer. PPE escalation guidance documents are attached for your reference. This guidance sets out which PPE should be used in three categories of community risk – low, moderate and high. Please also check the Queensland Health PPE website for the most current PPE guidance, accessible at <https://www.health.qld.gov.au/clinical-practice/guidelines-procedures/novel-coronavirus-qld-clinicians/personal-protective-equipment-ppe>.

In application of the PPE guidance, the Chief Health Officer has the responsibility to determine which level of risk is applicable in a LGA or other specified geographic area. Queensland Health facilities, residential aged care facilities, and disability accommodation services are required to comply with implementation of this guidance. For entities external to Queensland Health, a decision on whether to follow the PPE protocols in the Guidance for health services will then rest with the responsible Chief Executive or equivalent for that entity, except where a Directive requires use of PPE.

Further information for clinicians regarding Queensland Health's response to COVID-19 can be found at <https://www.health.qld.gov.au/clinical-practice/guidelines-procedures/novel-coronavirus-qlc-clinicians>.

Queensland Health appreciates your organisation's continued efforts in working under challenging circumstances arising from the impacts of COVID-19 on the Queensland community. Queensland Health recognises the short notice given regarding these changes, and acknowledges your organisation's and its members' responsiveness. However, a quick response to the latest circumstances is considered an important measure to contain any further exposure and to avoid further restrictions.

Yours sincerely

Adjunct Professor Shelley Nowlan
A/Deputy Director-General
Clinical Excellence Queensland
